Discharge Summary Priya Nand July2025

Hospital discharge summary establishing diagnosis, admission/discharge dates, treatment course, and medical necessity for covered inpatient services.

Document Details

General

Claimant[CL-6027] patient name on discharge summary is Priya Nand.

Hospitalization admission date is 2025-07-12 and discharge date is 2025-07-15.

Length of stay is 3 days inpatient.

Initial level of care includes ICU for 1 day followed by room stay for 2 days.

Final diagnosis is community-acquired pneumonia with acute hypoxemia.

Treating physician documents inpatient admission as medically necessary due to oxygen desaturation and fever with respiratory distress.

Treatment included oxygen therapy, IV antibiotics, nebulization, chest imaging, blood investigations, and physician monitoring.

No elective/cosmetic treatment is documented.

Discharge summary notes patient improved and discharged in stable condition with oral medication advice.

There is no indication of excluded personal-comfort services in the clinical record.

Additional Information

Create a 2-page hospital discharge summary PDF from 'Lotus Multispeciality Hospital'. Use realistic hospital formatting with patient details, UHID, admission/discharge details, diagnosis, investigations, treatment, and discharge advice. The patient must be Priya Nand. Set admission date 12 Jul 2025 and discharge date 15 Jul 2025. Explicitly mention ICU stay for first 24 hours due to oxygen saturation concerns, then transfer to room for two days. Diagnosis should be 'Community-acquired pneumonia with acute hypoxemia'. Include medically necessary inpatient treatment: oxygen therapy, IV antibiotics, nebulization, chest X-ray, CBC/CRP and other blood tests, physician visits, nursing care. State condition on discharge improved/stable. Avoid including any irrelevant PII beyond normal hospital document fields. Make the dates and clinical details align with the invoice and policy coverage analysis.
