Additional Information

Render a professional 2-page outpatient surgery discharge summary PDF for patient Nolan Pierce. Header: 'Riverview Surgical Center Discharge Summary'. Include patient name, DOB placeholder, MRN placeholder, procedure date 2025-04-11, discharge date 2025-04-12, surgeon Dr. Elena Cross. Procedure: uncomplicated laparoscopic appendectomy for acute uncomplicated appendicitis. Include a medications section listing acetaminophen 650 mg every 6 hours as needed, ibuprofen 400 mg every 8 hours as needed with food, oxycodone 5 mg every 6 hours as needed for breakthrough pain, dispense 8 tablets, and explicitly state 'No antibiotics needed after discharge.' Include wound care section: port sites closed with skin glue; mild pinkness and a small amount of clear or pink drainage can be normal for several days; keep clean and dry; shower after 24 hours; no soaking/baths/hot tub/swimming for 2 weeks; do not pick at glue. Include red flag return precautions: fever >100.4 F / 38 C, worsening or spreading redness, foul-smelling or thick yellow/green drainage, increasing swelling/bulging, incision opening, vomiting, severe worsening pain. Include follow-up section: surgery clinic in 1-2 weeks. Include a note under 'When imaging is needed' that ultrasound or CT is reserved for concern for deep fluid

collection, abscess, or dehiscence based on exam. Use realistic clinical formatting with signatures and footer page numbers.
