Scanned Clinic Handout Insulin Changes Last Month Priya Raman

Scanned clinic handout from last month's diabetes visit listing insulin changes, including a supersession warning and another-patient page footer risk cue.

Document Details

General

Entity Id: patient_priya_raman

Fact: The handout front page is addressed to Priya Raman.

Entity Id: visit_last_month_diabetes_followup

Fact: The document date is one month before the current telemedicine encounter.

Entity Id: insulin_handout_last_month

Fact: The instruction sheet says 'Increase glargine to 24 units nightly'.

Entity Id: insulin_handout_last_month

Fact: The instruction sheet says 'Start lispro 4 units before breakfast and 6 units before dinner'.

Entity Id: insulin_handout_last_month

Fact: The instruction sheet says 'If fasting glucose remains under 80 or you have symptoms of low sugar, call clinic before increasing further'.

Entity Id: insulin_handout_last_month

Fact: A note on the page says 'This plan replaces prior 20-unit glargine regimen from earlier visit'.

Entity Id: insulin_handout_last_month

Fact: The footer says 'Page 1 of 2'.

Entity Id: wrong_chart_risk_document

Fact: The second page in the same scanned PDF is for a different patient with a similar name: 'Priya R. Menon'.

Entity Id: wrong_chart_risk_document

Fact: That second page includes a visible header with a different medical record number than Priya Raman's page.

Entity Id: wrong_chart_risk_document

Fact: The mixed scan creates an explicit wrong-document risk requiring patient-identity reconciliation.

Additional Information

Render a 2-page PDF that looks like a scanned outpatient diabetes clinic handout. Page 1 should be clearly for patient 'Priya Raman' with a clinic date one month before the current telemedicine encounter. Include a concise typed section titled 'Insulin changes from today's visit' with exact instructions: 'Increase glargine to 24 units nightly' and 'Start lispro 4 units before breakfast and 6 units before dinner.' Include another line: 'If fasting glucose remains under 80 or you have symptoms of low sugar, call clinic before increasing further.' Add a short note: 'This plan replaces prior 20-unit glargine regimen from earlier visit.' Show a realistic clinic letterhead, signature initials, and footer 'Page 1 of 2.' Page 2 should visibly belong to a different patient, 'Priya R. Menon,' with a different MRN in the header and unrelated diabetes instruction snippets, making the mixed scan/wrong-chart risk obvious without overwhelming the page. The PDF should look like a scanner capture with slight grayscale skew and faint copier artifacts.
