followup_requirement:create_relocation_followup_after_initial_incident_routing

privacy_rule:do_not_include_serial_numbers_exact_employee_locations_internal_contacts_or_raw_costs_in_manager_summary

Additional Information

Render a realistic 3-page enterprise policy PDF titled 'Cobalt Ridge Health – Emergency Facilities Response Policy'. Include header/footer, policy versioning, and a boxed knowledge reference stating exact key 'cobalt_emergency_facilities_policy'. The body must precisely state: for pipe-burst level 2 incidents, immediately power down and isolate devices in the wet zone; in-scope assets are limited to the marked damage zone and direct splash radius; adjacent bays across the corridor and dry perimeter remain out of scope; temporary relocation is permitted only to approved swing space 'WS-2'; assets must not be reassigned to home addresses or any unapproved area; route the primary incident to 'Facilities Emergency'; create one follow-up incident for relocation after initial routing; and external summaries must omit serial numbers, exact employee locations, internal contacts, and raw cost figures. Add a short approval table and signatures to make the PDF realistic.
