Outage Timeline Export

Incident timeline export PDF for the scoped Silver Fern outage, showing one scheduled maintenance window that must be excluded from breach calculation.

Document Details

General

Entity Id: incident_case.silverfern_sla_case_q4

Fact: Scoped incident/case key is silverfern_sla_case_q4.

Entity Id: incident_case.silverfern_sla_case_q4

Fact: Case/customer is Silver Fern Logistics and service is Hosted Dispatch & Tracking Platform.

Entity Id: incident_case.silverfern_sla_case_q4

Fact: Timeline date is 14 October 2025.

Entity Id: incident_case.silverfern_sla_case_q4

Fact: There was a scheduled maintenance window from 01:00 to 01:20 NZDT marked as announced 96 hours in advance.

Entity Id: incident_case.silverfern_sla_case_q4

Fact: A production outage ran from 02:13 to 03:07 NZDT.

Entity Id: incident_case.silverfern_sla_case_q4

Fact: The outage duration outside exclusions is 54 minutes.

Entity Id: incident_case.silverfern_sla_case_q4

Fact: Root-cause note says vendor database failover automation stalled within vendor-managed environment.

Entity Id: incident_case.silverfern_sla_case_q4

Fact: Timeline explicitly labels the 01:00-01:20 event as excluded scheduled maintenance and the 02:13-03:07 event as customer-impacting production outage.

Entity Id: incident_case.silverfern_sla_case_q4

Fact: Internal note references assignment destination Vendor Risk Review for contractual breach assessment.

Additional Information

Create a realistic 2-page PDF export from an incident management system titled 'Outage Timeline Export'. Include a header bar with case reference 'silverfern_sla_case_q4', customer 'Silver Fern Logistics', service 'Hosted Dispatch & Tracking Platform', timezone 'NZDT', and export date '15 Oct 2025'. Use a table and timeline layout. Mandatory timeline rows: 00:56 monitoring degradation detected; 01:00 scheduled maintenance window begins; 01:20 scheduled maintenance window ends; note 'announced 96 hours in advance via maintenance notice CHG-8821' and status badge 'EXCLUDED'; 02:13 customer-impacting outage begins; 02:26 Sev-1 declared; 02:41 vendor DB failover automation stalled; 03:07 service restored; 03:18 incident bridge closed. Include a summary box with 'Customer-impacting production outage duration (outside exclusions): 54 minutes'. Add root cause text: 'Vendor database failover automation stalled within vendor-managed environment; no customer-side causation identified.' Include a note near the bottom: 'For contractual breach assessment, route to Vendor Risk Review if SLA threshold is met.' Make sure the maintenance window and the later outage are visually distinct so an agent must read the document correctly to avoid counting excluded downtime.
