Card Network Response Case-Cb-60488

Card-network response document summarizing issuer/network disposition for the alleged duplicate charge tied to case CASE-CB-60488.

Details

Document title references dispute case CASE-CB-60488 and order EC-60488.	
Customer name Diego Valera and customer ID CUS-6048 are listed in the case summary.	
Network/issuer response identifies the customer-reported second debit as a pending or reversed authorization hold rather than a second clearing/capture.	
The document states that only one clearing record/financial presentment was received for order EC-60488.	
The network response recommends merchant-side duplicate-capture correction only when multiple settled presentments exist; otherwise standard dispute/chargeback handling applies if the cardholder proceeds.	
The document includes the relevant card reference IDs matching the gateway screenshot events.	
The response shows no evidence of duplicate settled capture for the same order amount.	

Additional Information

a summary table with merchant reference, card reference IDs, amount '$184

In the findings section, explicitly state that one financial presentment/clearing record was received and that the additional same-amount event corresponds to a temporary authorization hold that was reversed or expired before clearing

Page 2 include a concise operational note indicating that duplicate-capture remediation applies only when more than one settled capture/presentment exists; absent duplicate clearing, the merchant not issue an internal duplicate-capture refund solely on the basis of a pending authorization claim, and if the cardholder persists the matter proceed through formal chargeback/dispute handling

Use formal business language and a realistic document layout with footer page numbers
