Knowledge Article Chargeback VS Duplicate Capture Policy

Internal policy article defining how to distinguish duplicate capture from authorization holds and when to refund versus route to chargeback operations.

Details

The article contains the exact handling guidance for duplicate-capture claims versus pending authorization disputes.	
It states that refunds or store credit may be issued internally only when the authoritative payment record shows more than one settled capture/clearing for the same order.	
It states that duplicate authorization holds, pending authorizations, or reversed holds do not qualify for duplicate-capture refunds.	
It instructs staff to rely on the order payment record plus gateway/network evidence before issuing any correction.	
It states that when no duplicate settled capture exists and a cardholder continues disputing, the case must be routed to the chargeback operations queue.	
It includes a note to document the final action under request ID CASE-CB-60488 or equivalent case record.	

Additional Information

precise policy text: (1) authenticate customer and confirm active profile; (2) verify authoritative order payment record and compare with gateway/network evidence; (3) issue refund/store credit only if multiple settled captures/clearings exist for the same order and amount; (4) do not refund for pending authorizations, duplicate auth holds, reversals, or issuer-side display artifacts; (5) if customer still contests and no duplicate settled capture exists, route to 'Chargeback Operations' queue; (6) record the action in the case file
