Scanned Clinic Handout Insulin Changes Last Month Priya Raman

Scanned clinic handout from last month's diabetes visit listing insulin changes, including a supersession warning and another-patient page footer risk cue.

Details

Document Type	scanned clinic handout from prior diabetes follow-up
Patient Name	Priya Raman
case ID HC-033 appears in the header	
title includes insulin changes from last month	
supersession warning states this handout may not reflect the current active medication list	
Basal Insulin Instruction	insulin glargine 18 units subcutaneously at bedtime
Mealtime Insulin Instruction	insulin lispro 4 units before dinner
Titration Instruction	increase glargine by 2 units every 3 nights if fasting glucose remains above 140 mg/dL
Hypoglycemia Instruction	reduce glargine by 4 units and call clinic if blood glucose is below 80 mg/dL
Follow-Up Instruction	continue home glucose log and bring readings to next visit
footer on one page contains another-patient risk cue indicating the page may belong to a different patient	
scan appearance includes handwritten check marks or initials next to insulin changes	

Additional Information

a realistic 2-page scanned outpatient diabetes handout PDF as if photocopied and then scanned into the chart

short bulleted medication-adjustment instructions, safety guidance, and home glucose monitoring instructions

a clearly visible supersession warning near the top or in a boxed notice indicating that the handout may be outdated compared with the active medication list in the chart

Page 2 look like a partially mismatched scanned page included in error: preserve the same photocopied style but place a footer risk cue suggesting another patient's page was mixed into the scan, while still keeping the overall document plausible as a chart upload
